

Presenter

cation

These are the four main components of our Hazard Communication Program.

- Material Safety Data
 Sheets
- Labeling
- Training
- Written Program

CONFIDENTIAL

5 OF 31

Purpose of OSHA's Hazard Communication Standard

To ensure that employers and employees know about work hazards and how to protect themselves so that the incidence of illnesses and injuries due to hazardous chemicals is reduced.

Hazard Communication Program

Program

CONFIDENTIAL

Container Labeling

Material Safety Data Sheet

Employer Responsibilities

- Identify and list hazardous chemicals in their workplaces
- Obtain Material Safety Data Sheets (MSDSs)
- Implement a written HazCom program
- Communicate hazard information to employees through labels, MSDSs, and formal training programs

Presenter

The list of hazardous chemicals here can be found in the Table of Contents in our big blue MSDS books as well as in our online archive. All products that arrive at our facility should have the MSDS with it. If it does not, please contact the EHS Department. It is also vital that for those of you that can, and do, order chemicals, is to ensure that the included MSDS is promptly passed on to the EHS Department for entry into our MSDS archives. This is key to staying safe and in compliance.

pilities

nazardous chemicals in their

- Obtain Material Safety Data Sheets (MSDSs)
- Implement a written HazCom program
- Communicate hazard information to employees through labels, MSDSs, and formal training programs

7 OF 31

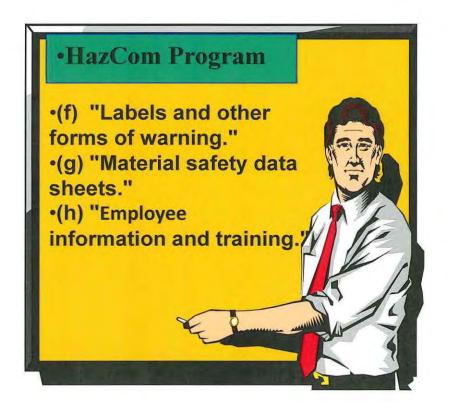

CONFIDENTIAL

Why is a written program required?

- Ensures that all employers receive the information they need to inform and train their employees
- Provides necessary hazard information to employees

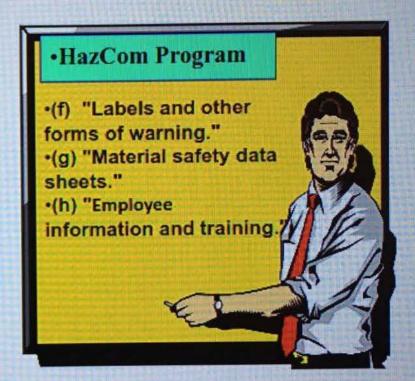

Why is a written program required?

Presenter

The written program provides the foundation our Hazard Communication Program.

- Ensures that all employers receive the information they need to inform and train their employees
- Provides necessary hazard information to employees

CONFIDENTIAL

JUAREZ V PVA SPX002044

8 OF 31

Written HazCom Program Requirements

- Describes container labeling, MSDSs, and employee training for each workplace
- List of the hazardous chemicals
- Make available information regarding hazards and protective measures to other employers onsite

How can workplace hazards be minimized?

- The first step in minimizing workplace hazards is to perform a thorough hazard assessment
- Employers can rely on the evaluations performed by the manufacturers or importers to establish the hazards of the chemicals they use
 - This information is obtained from MSDSs and labels

#:1506

How can workplace hazards

Presenter

Chemical manufacturers and importers must review scientific evidence on the hazards of chemicals they produce or import and report findings to their employees and to employers who distribute or use their products.

- The first step in minimizing workplace hazards is to perform a thorough hazard assessment
- Employers can rely on the evaluations performed by the manufacturers or importers to establish the hazards of the chemicals they use
 - This information is obtained from MSDSs and labels

CONFIDENTIAL

How Must Chemicals be Labeled?

Each container of hazardous chemicals entering the workplace must be labeled or marked with:

- Identity of the chemical*
- Appropriate hazard warnings*
- Name and address of the responsible party (manufacturer or distributor)
- *Required on secondary container label

Labeled? Presenter

Chemical manufacturers and importers must convey the hazard information to downstream employers by means of labels on containers and Material Safety Data Sheets (MSDSs). Language used on the warning label does not have to be identical to that on the MSDS.

A secondary container is a container that is filled from a larger, primary container such as a 55 gallon Acetone drum for example. The secondary container label does not need the name and address of the manufacturer or distributor, just the name of the chemical and it's primary hazard.

Consumer products having labels meeting requirements of the Consumer Product Safety Act do not have to have additional labeling under the HazCom Standard.

rdous chemicals e must be

hemical* ard warnings* ess of the y (manufacturer

ndary container

label

CONFIDENTIAL

Container Labeling in the Workplace

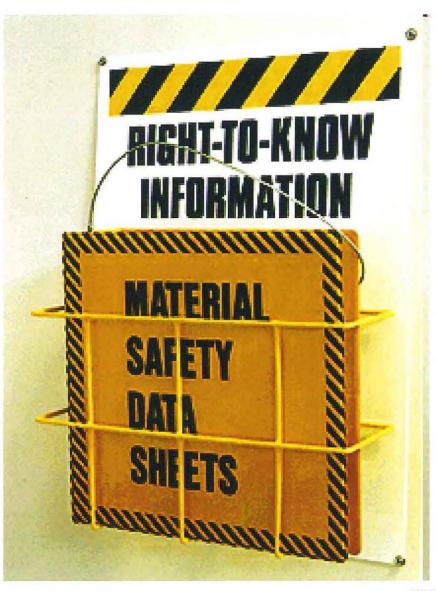

- The hazard warning can be any type of message, picture, or symbol that provides information on the hazards of the chemical(s)
- Labels must be legible, in English(plus other languages, if desired), and prominently displayed

Material Safety Data Sheet

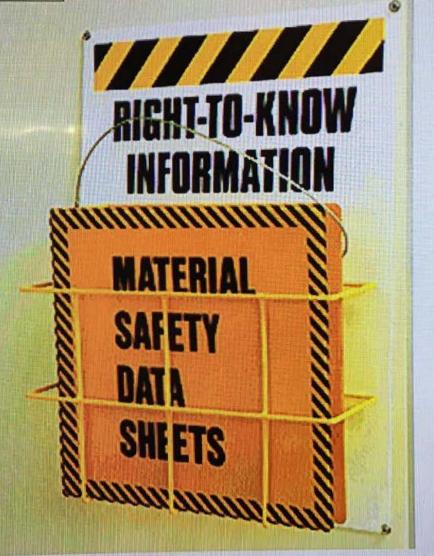

Presenter

A Material Safety Data Sheet (MSDS) is one of the most critical components of our Hazard Communication program.

Sheet

SPACEX

CONFIDENTIAL

Material Safety Data Sheets

Prepared by the chemical manufacturer, distributor, or importer and describe:

- Identity of hazardous chemicals
- Physical hazards, such as fire and explosion
- Health hazards, such as signs of exposure
- Routes of exposure
- Precautions for safe handling and use
- Emergency and first-aid procedures
- Control measures

Sheets

Presenter

Chemical manufacturers and importers must develop an MSDS for each hazardous chemical they produce or import, and must provide the MSDS at the time of the initial shipment to a downstream distributor or user. Distributors also emical manufacturer, must ensure that downstream employers are similarly provided an MSDS.

The MSDSs must be updated by the chemical manufacturer or importer within three months of learning of "new or significant information" regarding the chemical's hazard potential.

OSHA does not require that MSDSs be provided to purchasers of household consumer products (such as "windex" and "white-out") when the products are used in the workplace in the same manner that a consumer would use them, i.e.: where the duration and frequency of use (and therefore exposure) is not greater than what the typical consumer would experience. Employees who are required to work with hazardous chemicals in a greater duration and frequency of exposure than a normal consumer have a right to know about the properties of those hazardous chemicals.

rter and describe:

dous chemicals such as fire and explosion such as signs of exposure ure afe handling and use irst-aid procedures

Material Safety Data Sheets

- Must be in English and include information regarding the specific chemical identity and common names
- Must provide information about the:
 - Physical and chemical characteristics
 - Health effects
 - Exposure limits
 - Carcinogenicity (cancer-causing)
 - Identification (name, address, and telephone number) of the organization responsible for preparing the sheet
- Must be readily accessible to employees in their work area during all work shifts

a Sheets Presenter

Our MSDS's are always available in our online archive as well as in the big blue MSDS books in the kitchen area.

- Must be in English and include information regarding the specific chemical identity and common names
- Must provide information about the:
 - Physical and chemical characteristics
 - Health effects
 - Exposure limits
 - Carcinogenicity (cancer-causing)
 - Identification (name, address, and telephone number) of the organization responsible for preparing the sheet
- Must be readily accessible to employees in their work area during all work shifts

15 OF 31

CONFIDENTIAL

Material Safety Data Sheets

- MSDS's have no prescribed format
- If no MSDS has been received for a hazardous chemical, employer must contact the supplier, manufacturer, or importer to obtain one and maintain a record of the contact

Material Safety Data Sheet May be used to comply with OSHA's Hazard Communication Standard, 29 CFR 1910,1200. Standard must be consulted for specific requirements. IDENTITY (As Used on Label and List)		U.S. Department of Labor Occupational Safety and Health Administration (Non-Mandatory Form) Form Approved OMB No. 1218–0072 Note: Blank spaces are not permitted. MSDS - Trade Secrets

- A "trade secret" is something that gives an employer an opportunity to obtain an advantage over competitors who do not know about the trade secret or who do not use it
- Includes the chemical name, the Chemical Abstracts Services (CAS) Registry Number, or any other specific information that reveals the precise designation

MSDS - Trade Secrets

- It does not extend to PELs or TLVs
 - If the hazardous chemical or a component thereof has a PEL or TLV, this must be reflected on the MSDS
- Limited disclosure of trade secrets to health professionals who are furnishing medical or other occupational health services to exposed employees, employees and their designated representatives, under specified conditions of need and confidentiality

MSDS - Trade Secrets

Disclosure in a Medical Emergency

- The chemical manufacturer, importer, or employer must immediately disclose the specific chemical identity of a hazardous chemical to a treating physician or nurse when the information is needed for proper emergency or first-aid treatment
- As soon as circumstances permit, the chemical manufacturer, importer, or employer may obtain a written statement of need and a confidentiality agreement

Training

Training is required for employees who are exposed to hazardous chemicals in their work area:

- At the time of initial assignment
- Whenever a new hazard is introduced into their work area

Presenter

Managers, in conjunction with the EHS Department, will ensure that all of their employees are trained in the safe use of all hazardous substances introduced into their workplace.

maining is required for employees who are exposed to hazardous chemicals in their work area:

- At the time of initial assignment
- Whenever a new hazard is introduced into their work area

CONFIDENTIAL

What training is needed to protect workers?

- Explanation of the HazCom program, including information on labels, MSDSs, and how to obtain and use available hazard information
- Hazards of chemicals
- Protective measures such as engineering controls, work practices, and the use of PPE
- How to detect the presence or release of a hazardous chemical (using monitoring devices, observation, or smell)

#:1523

What training is needed to

Presenter

The MSDS is the primary source for hazard communication training. In it you will find information on the hazards of chemicals, what Personal Protective Equipment (PPE) is required to keep you safe, what sort of work practices should be used, how to detect the presence of the chemical and what to do in the event of a leak or spill.

HazCom program, including
he presence of he event of a
rd information

- Hazards of chemicals

- How to detect the presence or release of a hazardous chemical (using monitoring devices, observation, or smell)

CONFIDENTIAL

Proposition 65

- Safe Drinking Water and Toxic Enforcement Act added to Hazard Communication in 1991
- Requires the governor to publish a list of chemicals known to the State of California to cause cancer, birth defects, or reproductive harm

Proposition 65

List of chemicals may be found at the California
 Office of Environmental Health Hazard Assessment's website:

www.oehha.ca.gov

 Full text of Prop 65 is in T22CCR, Section 12000 et seq.

Proposition 65

WARNING

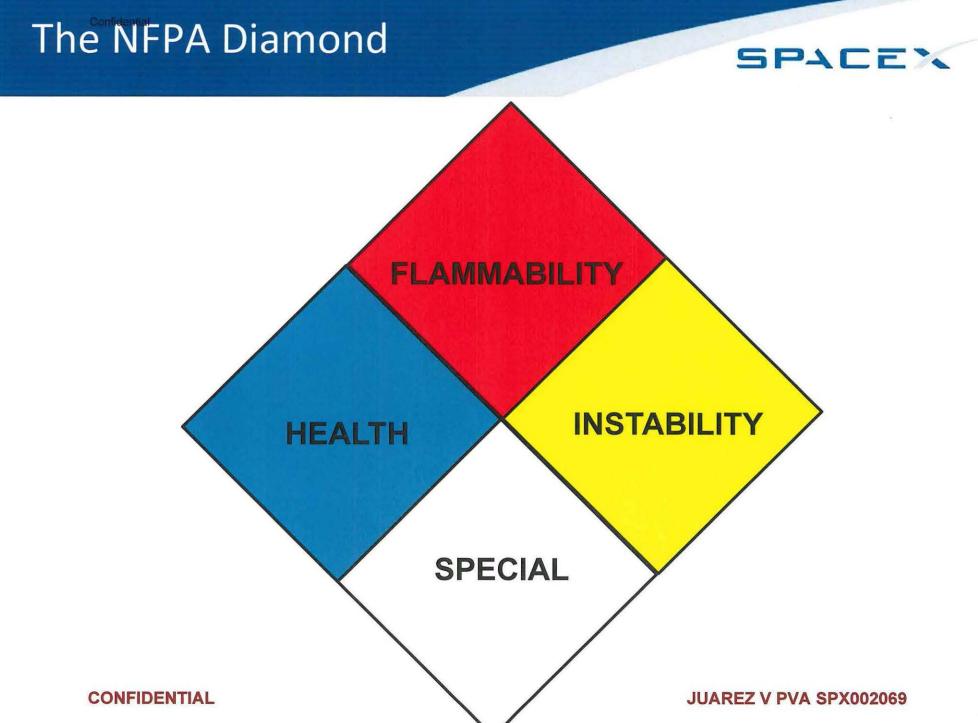

THIS AREA CONTAINS CHEMICALS KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER AND BIRTH DEFECTS OR OTHER REPRODUCTIVE HARM.

NFPA 704 Rating System

- NFPA National Fire Protection Agency
 - Writes many standards incorporated by OSHA
- Applicable to us here at Spacex since we use and store hazardous materials

Different from Department of Transportation designations

Where Are They Here?

- On the corners of the main building where the driveways enter the complex.
- On the outside of the various enclosed work areas inside the building.
- On some chemical labels where the diamond does represent the chemical hazards inside.

An Example SPACEX CONFIDENTIAL **JUAREZ V PVA SPX002071**

Other Important Labels

- Department of Transportation (DOT)
 - 9 hazard classes
 - Specific colors and designs
 - You see them around here

Summary

- OSHA's Hazard Communication Standard is based on a simple concept - that employees have both a need and a right to know the hazards and identities of the chemicals they are exposed to when working
- Employees also need to know what protective measures are available to prevent adverse effects from occurring
